

Winged Sumac

Rhus copallinum

A large, deciduous shrub or small tree whose leaves turn reddish-purple in the fall. A winged leaf axis distinguishes this sumac from other species. Makes good ornamental plantings and hedges because of the brilliant red fall foliage. Around 300 bird species include sumac fruit in their diet.

Bloom Season: Mid Summer - Late Summer
Flower Colors: Yellow
Soil Tolerance: Average, Clay, Sandy, Dry, Moist
Height: 7-15 feet **Spread:** 10-20 feet

PERENNIAL
