

Beach Plum

Prunus maritima

Beach plum is a rounded, dense, suckering shrub found on the dunes around Long Island. Its growth habit lends itself well to hedgerows. It attracts many bees and other pollinators during the Spring with its copious white blooms which turn pink after pollination. The edible purple fruits ripen from August to October, and are well suited to making jams and jellies.

Bloom Season:	Early Spring - Late Spring
Flower Colors:	Pink, White
Soil Tolerance:	Average, Sandy, Dry, Moist, Well drained
Height: 3-6 feet	Spread: 3-6 feet
