

Gray Goldenrod

Solidago nemoralis

A beautiful plant in flower, it is an effective groundcover in dry, sunny conditions and is often used in native landscapes, rock gardens, butterfly gardens and meadow plantings. One of the smallest of the goldenrods, the central stem is reddish or grey-green and covered with short white hairs. It can colonize by creeping rhizomes (underground rootstalk) and self-seeding. Easily grown.

Bloom Season: Late Spring - Early Fall

Flower Colors: Yellow

Soil Tolerance: Average, Clay, Sandy, Dry

Height: 1-3 feet **Spread:** 1-2 feet

PERENNIAL
