

Downy Goldenrod

Solidago puberula

This goldenrod has fine hairs covering its very leafy stems. It is relatively shorter than its other goldenrod cousins. It is drought-tolerant and common in well-drained, sunny locations. Downy goldenrod is an excellent late-season nectar and pollen source for a wide variety of pollinators.

Bloom Season: Mid Summer - Early Fall

Flower Colors: Orange, Yellow

Soil Tolerance: Dry

Height: 1-3 feet

Spread: 1-2 feet

PERENNIAL
