

Slender Bush Clover

Lespedeza virginica

Is found growing in rocky/sandy soil and dry, open woods, gravel stream banks, thickets, prairies, bluffs, glades, roadsides, railroads. Tolerates droughts and floods. It naturalizes easily through self seeding but also propagates through rooting of its prostrate stems. The showy blooms grow on new wood, so cut back to the ground in the winter and it will come back next with vigor in the spring.

Bloom Season:	Early Summer - Late Summer
Flower Colors:	Pink, Purple
Soil Tolerance:	Average, Sandy, Dry, Well drained
Height: 1-3 feet	Spread: 1-2 feet
PERENNIAL
