

Sweet Pepperbush

Clethra alnifolia

Also known as Summersweet, Clethra is a common flowering bush found along the shores of our freshwater features (ponds, lakes, rivers) and wetter woodland edges. Aptly named, its narrow clusters of blooms are quite fragrant during mid to late Summer, attracting copious bees and other pollinators. These flowers grow into peppercorn-shaped seeds in late Summer. A great addition to any rain garden and hedgerows.

Bloom Season: Mid Summer - Late Summer

Flower Colors: White

Soil Tolerance: Average, Clay, Sandy, Moist, Poorly drained

Height: 3-8 feet

Spread: 4-6 feet

PERENNIAL
