

Frost Aster

Symphotrichum pilosum

Also known as the hairy white old-field aster, a common aster that grows more compact than others in the species. Its name comes from its very hairy stems. Many clustered small white flowers adorn its stems during late summer through fall, attracting pollinators. Many birds such as turkey, grouse, and sparrows enjoy its seeds during the winter.

Bloom Season: Late Summer - Mid Fall

Flower Colors: White

Soil Tolerance: Average, Moist, Well drained

Height: 2-4 feet

Spread: 2-4 feet

PERENNIAL
