

Tall Goldenrod

Solidago altissima

One of the quintessential goldenrods in our wild areas. Tall Goldenrod is also called Late Goldenrod, and blooms later than most other of its cousins. It grows quickly and spreads both by seed and rhizomes to form colonies. Its large clusters of yellow blooms are a great source of pollen for bees and butterflies.

Bloom Season: Late Summer - Mid Fall

Flower Colors: Yellow

Soil Tolerance: Average, Clay, Sandy, Dry

Height: 2-6 feet

Spread: 1-3 feet

PERENNIAL
