

# Long's Sedge

## *Carex Longii*

Long's Sedge is a grass-like plant found in seasonally wet areas. Their wild populations are considered vulnerable in New York. The flowers begin in late spring, and the following seeds provide important nutrition to waterfowl and songbirds. Best planted in areas that are prone to flooding, but do not stay waterlogged.

**Bloom Season:** Mid Spring - Early Summer

**Flower Colors:** Green

**Soil Tolerance:** Sandy, Moist, Poorly drained

**Height:** 1-3 feet

**Spread:**

**PERENNIAL**
